Abramovici, F. & Z. Alterman, Effect of a point source on the motion of the surface of an elastic solid sphere 189

Abstracts:

Seismic studies in the crust and upper mantle, M. Landisman & S. Mueller .. 253
——, Upper mantle structure from a new body wave travel time, apparent velocity and attenuation data, D. L. Anderson, M. Niazi & B. Julian 253
——, Automated inversion of seismic field amplitude–time properties for crust and upper mantle structure, C. Archambeau 254
——, The present status of free oscillation interpretations, D. L. Anderson 255
——, The inverse problem for the free oscillation of the Earth, F. Gilbert 255
——, Comparison of spectra for spheroidal modes excited by the Chilean and Alaskan quakes, L. B. Slichter, G. J. F. MacDonald, M. Caputo & C. L. Hager 256
——, Evidence from high-pressure experiments bearing on the density and composition of the Earth, F. Birch 256
——, Zero frequency seismology, F. Press 257
——, Viscosity distribution within the Earth, H. Takeuchi 257
——, Observed attenuation and Q values of seismic surface waves in the upper mantle, Ari Ben-Menahem 258
——, Dissipation in the toroidal modes due to the core viscosity, M. Caputo 258
——, Deformation of á non-gravitating elastic sphere by a finite internal dislocation, Ari Ben-Menahem 259
——, Dynamic edge conditions in elastic wedges, M. Papadopoulos 259
——, Theoretical calculation of the spectrum, phase velocity, and decay of first arrivals in layered elastic systems, Robert A. Phinney 260
——, Effects of certain parameters on time-sharing systems, Gene M. Amdahl 260
——, Geophysically oriented computers, G. Estrin 261
——, Basic principles of logical design of scientifically oriented computers, A. H. Taub .. 262
——, Design considerations for the successor to GOLEM I, S. Ruhman 262
——, EEG computer techniques applicable to geophysical data, Thelma Estrin 263
——, Weather modification in the U.S.A.—recent developments, Julian Bigelow 263
——, Theoretical and model seismicity, L. Knopoff and R. Burridge 265
——, On Fourier analysis, Sir Harold Jeffreys 265
——, Some new procedures for processing seismic records, E. A. Flinn 266
——, Simulation of California earthquake sequences by Monte Carlo methods, C. Lomnitz 266

Akasofu, S.-I., P. C. Kendall, S. Chapman & P. N. Swartztrauber, The computation of the magnetic field of any axisymmetric current distribution—magnetospheric applications 349

Alterman, Z. & F. Abramovici, Effect of a point source on the motion of the surface of an elastic solid sphere 189

Asbel, I. Ja., V. I. Keilis-Borok & T. B. Yanovskaja, A technique of a joint interpretation of travel–time and amplitude–distance curves in the upper mantle studies 25

Bhalla, M. S., R. K. Verma & G. Pullaiah, The palaeomagnetism of hematites in the Veldurti area, Cuddapah Basin, India 499

Bhimasankaram, V. L. S. & M. Lewis, Magnetic reversal phenomena in pyrrhotite .. 485

Book Reviews:

Solar Plasma, Geomagnetism and Aurora 365
——, Lunar Geology 365
——, Problems of Palaeoclimatology 366
——, Seismic Waves: Radiation, Transmission, Attenuation 368
——, Structural Geology (International Series in the Earth Sciences) 369
——, Soviet Antarctic Expedition: Information Bulletin 371
——, Climates of the U.S.S.R 561
——, The Moon—a Fundamental Survey 562
——, Auroral Phenomenon Experiments and Theory 563
